

1.Scenario Name

Search Functionality

Weak Prompt

"Test the search feature."

What I Feel is Missing

In ICEPOT – Only half Instructions is present , others are missing . No product type (e-commerce, hospital), no filter/sort behavior, no empty/invalid input scenarios, no performance angle.

Instruction

Write the test cases to validate the search feature.

Context

Application is an online retail ecommerce platform, where its selling electronics and clothing, Data size over 50000 active products are available in database, its search bar with auto suggestion, typo correction and advanced filter sidebar.

Example

a.Exact match : Search for an exact name e.g iphone 17 to verify it appears as the top results.

b.Partial Match : Search using partial string to ensure related products are still generate.

c.Empty Query : Click on the search button with zero characters entered to verify it doesn't crash and prompts the user.

Others like sorting , filtering , characters limits , whitespaces only.

Test Case ID| Test Case Name| Test Steps |Test data| Expected result| Actual result| Status|

TC_01|Exact Match TC|1.Open the online retail ecommerce portal with your credentials , 2.Go to the Home page and search for Iphone 17 | Credentials & Iphone 17 | verify Iphone 17 appears as the top results| Iphone 17 appears as the top results

Persona

Act as a Senior QA Engineer

Output Format

Tables containing the following Columns

Test Case ID| Test Case Name| Test Steps |Test data| Expected result| Actual result| Status|

Tone

Technical

Rewritten Prompt

Instruction

Write the test cases to validate the search feature.

Observations

Agent was not able to give the intended results with weak Prompt and generic results were given, with ICEPOT 40 Test cases are given with accurate coverage in table format.

2.Scenario Name

Role-Based Access Control

Weak Prompt

"Write test cases for user roles."

What I Feel is Missing

In ICEPOT – Only half Instructions is present , others are No role types (Admin, Manager, Viewer), no permission matrix, no unauthorized access scenarios, no app domain.

Instruction

Write the test cases to validate the user roles.

Context

Application is an online hospital portal platform, where user can login to book doctor appointment and see the procedure required for each diagnosis.

Example

Test Case ID| Test Case Name| Test Steps |Test data| Expected result| Actual result| Status|

TC_01|Exact Match TC|1.Open the online hospital portal platform with your credentials , 2.Go to the Home page and search for a general physician | Credentials & general physician name | verify general physician appears as the top results & User able to select| General physician appears as the top results & User able to select

Persona

Act as a Senior QA Engineer

Output Format

Tables containing the following Columns

Test Case ID| Test Case Name| Test Steps |Test data| Expected result| Actual result| Status|

Observations

Agent was not able to give the intended results with weak Prompt , with ICEPOT 30 Test cases are given with accurate coverage in table format. – Test cases added For Role based validation (Guest User, Patient , Doctor, Admin & Security) is added.

3.Scenario Name

API Testing

Weak Prompt

"Write API test cases for user registration."

What I Feel is Missing

In ICEPOT – Only half Instructions is present & No HTTP method, no request/response structure, no status codes to validate, no tool context (Postman/RestAssured).

Instruction

"Write 20 API test cases for user registration."

Context

Application is an online hospital portal platform, where user can login to book doctor appointment and see the procedure required for each diagnosis. User registration in the 1st page as Sign up icon present, Validate the application with Rest Assured. Check the post , put , get , delete & Patch HTTP protocols , validate the response code and also the validate the schema

Example

Test Case ID| Test Case Name| Test Steps |Test data| Expected result| Actual result| Status|

*TC_01 | Register User with Valid Data | 1. Send a **POST** request to the Registration API. 2. Provide all mandatory fields with valid values 3. Verify the response. | HTTP **201 Created** returned. User is registered successfully with a unique User ID. | User registered successfully.*

Persona

Act as a Senior QA Engineer

Output Format
