

AI Test Case Generator:

Frontend: UI

Backend :n8n

The screenshot shows the n8n workflow editor interface. The top bar indicates the workflow is named "US_to Test Design" and is in the "Personal" workspace. The left sidebar shows the "Executions" tab with a list of recent runs, including one from August 12, 21:13:54, which succeeded in 3.202s. The main editor area shows the workflow diagram with nodes: "Webhook", "HTTP Request", "Basic LLM Chain", and "Respond to Webhook1". The "Respond to Webhook1" node is selected, showing its configuration and output. The output is a JSON object containing test case details for "TC_REP_001" and "TC_REP_002".

Test Case ID: TC_REP_001 Title: Verify successful report generation and display with accurate and up-to-date information Preconditions: Reports exist in the system and user is logged in with appropriate permissions Steps: 1. Navigate to the Reports section 2. Select a report to view or generate 3. Execute the report generation action Expected Result: The selected report displays accurate and up-to-date information as present in the system Test Case ID: TC_REP_002 Title: Verify report generation when no reports exist in the system Preconditions: No reports exist in the system and user is logged...

The screenshot shows the StoryMind AI dashboard. The top navigation bar includes "Dashboard", "Jira Connection", "History", and "API Docs". The user is logged in as "n8n Connected" with a "PM" role. The main content area features the "AI Test Case Generator" section, which includes a "JIRA STORY KEY" input field (e.g., "TES-1"), a list of "ANALYSIS MODULES" (Clarity & Grammar, Acceptance Criteria, Technical Feasibility), and a "Create Test Cases for the above UserStory" button. A "Review Workspace" section is also visible, showing a "Ready to Analyze" status and a prompt to enter a Jira story key. The bottom of the dashboard has an "UPGRADE Go Pro Plan" section.

Test Design Completed

Test Case ID: TCC/D001

Title: Verify successful dashboard loading with relevant data and visualizations for user with valid access

Preconditions: User has valid access credentials and is logged into the system

Steps:

1. Navigate to the Consultant Dashboard
2. Select the My Inpatients section
3. Observe the loading time and displayed data

Expected Result: Relevant data and visualizations for inpatients are displayed correctly without delay

Test Case ID: TCC/D002

Browser tabs: (107) WhatsApp, Cisco Web, Assignme, genai-ass, Testleaf, US_to, StoryMind, Ask Gemini. Address bar: C:/Gen%20AI%20Course/Class/Week%206/Sun/UITestcaseGen/index.html. Create Test Cases for the above UserStory. Review Workspace: Test Design Completed. Test Case ID: TCC/D003. Title: Verify dashboard performance under boundary condition with maximum allowable concurrent inpatient records. Preconditions: User has valid access and the consultant account has the maximum system limit of inpatient records assigned. Steps: 1. Open the Consultant Dashboard My Inpatients section. 2. Measure the time taken to render all records and visualizations. Expected Result: Access is denied, and an appropriate error message is displayed.

Test Design Completed

Expected Result: All records and visualizations load correctly without performance delay or timeout

Test Case ID: TCC/D004

Title: Verify dashboard handling when no inpatient data is available

Preconditions: User has valid access, but the consultant currently has zero assigned inpatients

Steps:

1. Open the Consultant Dashboard My Inpatients section
2. Check the data display and visualizations

Expected Result: The dashboard loads successfully without delay and displays an appropriate empty state message (e.g., "No inpatients found")

Expected Result: The dashboard loads successfully without delay and displays an appropriate empty state message (e.g., "No inpatients found")

Test Case ID: TCC/D005

Title: Verify system behavior and error handling during server timeout or network failure while loading dashboard data

Preconditions: User has valid access and is on the dashboard navigation screen

Steps:

1. Simulate a network interruption or server failure
2. Open the Consultant Dashboard My Inpatients section
3. Observe the system response

Expected Result: System catches the failure gracefully and displays an appropriate error message allowing the user to retry
